

Postgraduate Research Opportunity

Transdisciplinary research to support marine fisheries assessments

This funded opportunity is for a PhD student, faculty research assistant (FRA), or postdoctoral scholar to conduct scientific research to support stock assessments for groundfishes along the US West Coast. The successful candidate will join the [Integrated Marine Fisheries Lab](#) at [Oregon State University](#) and work closely with scientists at [NOAA's Northwest Fisheries Science Center](#).

Project scope: Contemporary fisheries stock assessments increasingly integrate diverse data sources and advanced statistical modeling to characterize population dynamics and quantify scientific uncertainty for use in policy decision-making. This position will involve gathering fishery-dependent and fishery-independent information, conducting statistical analyses, and translating scientific results into management-relevant products. An important aspect of the work will be collaborating with fishery stakeholders to help inform stock assessment models and create a shared understanding of federally-managed species. The incumbent will contribute to ongoing research related to life history, movement, spatial ecology, ecological drivers of productivity, and emerging methods in fisheries science. There will also be opportunities to identify novel research questions to help meet marine resource management objectives.

Qualifications: A master's degree (or non-US equivalent) in marine or fisheries science, ecology, statistics, or related field and authorization to work in the United States are required. The successful candidate will be experienced with conducting qualitative analyses, coding in R, and writing scientific papers or technical reports. Applicants should have a history of working with fishing industries and/or resource managers.

Start Date: January 2027

Location: [Hatfield Marine Science Center](#) in Newport, OR.

Salary/Benefits: This opportunity provides an initial 2 yr of support, commensurate with experience (PhD student: 31K per yr + tuition; FRA: 58 to 76K per yr; postdoctoral scholar: 69 to 76K per yr). Healthcare benefits, work-related travel, and applicable research costs are also provided. Additional funding may be secured through grants, scholarships, fellowships, and/or teaching assistantships.

To Apply: Email a single pdf to cheryl.barnes@oregonstate.edu (subject: CoopRes Opp), including:

- 1) a cover letter describing your interest in the position and relevant experience,
- 2) curriculum vitae,
- 3) unofficial transcripts, and
- 4) contact information for three references.

Application review will begin on October 10, 2026. The position will remain open until filled.

The IMF Lab places considerable value on diversity, equity, and inclusion. Those with underrepresented and/or historically marginalized identities are encouraged to apply.
